# Alzion Labs React Native Test

## Specifications

The objective is to build a mobile ecommerce application for a plant store. The design of this app will be based on - [Figma link](#). You can use the API - GET <https://create.blinkapi.io/api/eSphKNzwb9EJBt6GBjKx7Q> to get the list of products.

## Requirements

1. Create a mobile application in React Native that displays a list of plants on sale.
2. The app should have 2 screens -
  - a. **Screen 1:** Use the GET API above to display a list of products based on the design given to you.
  - b. **Screen 2:** Clicking on any product in the list on screen 1 should open the product details page. The design for this page is also included in the link above.
3. The project should be built with React Native. You can use any react native libraries for this app.
4. Please pay attention to the styling and transitions. Switching between screens, scrolling through products should result in a smooth transition.
5. If time permits, please feel free to expand on the requirements. This would be considered for bonus marks.
6. Make sure to push your code to a public Github repository.

## Deliverables

1. Modular and working code (link to the Github repository).
2. Demo - you can give us an app demo on a simulator on your machine.
3. Unit tests, build scripts etc.
4. Further enhancements (proposals can be mentioned in the Github README).

## Scoring

1. 50 marks for modular code implementation.
2. 30 marks for the overall experience.

3. 10 marks for the tests and build.
4. 10 marks bonus (subjective).
